

A.C. Furniture constantly assesses for ways to lower our carbon footprint and offer “Green” alternatives to our industry’s manufacturing processes. A.C. Furniture sources its domestic wood from sustainable forests. In addition, we recently implemented a recycling program that reduces our factory’s carbon footprint by over 50%. Over 80% of our incoming raw materials is either packaged in corrugated board, wood crates or come on wooden pallets. We recycle 100% of these packaging items.

We are dedicated to contributing to a sustainable future for our planet through:

Commitment to the 3 “R”s

REDUCE consumption, waste, and pollutants

REUSE what we have

RECYCLE everything we can

- Corrugated packaging used for boxing our completed product contains in excess of 30% recycled material.
- A.C. Furniture utilizes dust collection systems in our machine rooms and cabinet room. A.C. Furniture collects and supplies the saw dust and sanding dust from wood components to the local steam plant for conversion into electricity.
- We fabricate our own poly for use in all of our upholstered items. All scrap pieces are provided to the carpet pad industry for conversion into carpet pads.
- Left over C.O.M. (customers own material) is utilized as spring cover on our fully upholstered pieces if a buyer cannot be found.
- Conserving energy, water and other natural resources.
- Compliance with all environmental regulations.
- Striving to buy, sell, and use environmentally friendly products.
- Educating employees, customers and businesses.
- **Keeping our workplace clean today for a better world tomorrow.**
